

17/12/2019

Before the meeting:

- Question: How can I understand/visualise what a strategy will do to an expression more easily. For example, it gives problems when it comes to creating example strategies for test purposes.

During the Meeting:

- The Abstract Syntax Tree of a Lift expression can be visualised using the DOT tool. Lift has an inbuilt function for generating a .dot file for an expression, and this gives you a visual representation of how the structure may change when strategies are applied.

Actions going forward:

- None, continue work over Christmas of simple expression transformer
